Hiring Team,
VectorShift

Dear VectorShift Team,

I am writing to express my enthusiastic interest in the Frontend Engineer position at VectorShift. Your mission to empower users by creating custom AI workflows through an intuitive no-code platform deeply resonates with my passion for building user-centric and technically sophisticated web applications.

My experience in developing performant, responsive interfaces with React, Next.js, and TypeScript aligns perfectly with your technical requirements. I have managed the entire web development process, from conceptualizing UI/UX in Figma—as seen in my 'Sustainable' design project—to deploying full-stack applications like my 'Note-Taking App.' This background has provided me with a strong foundation in frontend architecture, seamless API integration, and a keen eye for UI design, all of which are central to this role.

What excites me most is the opportunity to work directly with the founders to shape the DNA of your user experience and establish foundational frontend practices. I am a collaborative problem-solver, eager to incorporate user feedback, drive web performance optimizations, and contribute to a product that is both powerful and exceptionally intuitive.

Thank you for considering my application. I am confident that my skills and enthusiasm for overcoming challenges will make me a valuable addition to your team, and I look forward to discussing how I can help advance VectorShift's vision.

Warm regards,

HARJAP SINGH
